ABOUT US

The quality of Mobliner Stål products is ensured by a combination of modern innovative technology and craftsmanship. We use the best materials in production and the best experts in testing. In order to increase our customers' options, we also create new products with innovative designs on a daily basis.

We know that these days a product with a unique design must also be demandingly functional. The environmental friendliness of our products is reflected in the quality. This means that the products have a long service life, so there is no need to renew them every year. By acting in this way, we save valuable mineral resources.

OUR STORY

When furnishing the house, I faced new problems, how to get heat and how to get the house lit. What was offered in the shopping network did not fit. After a long consideration, I decided in favor of the most difficult solution - to do it myself. Being a fan of Gothic architecture, I set foot on these ancient paths. I tried to imagine what heaters and lights could have been in these old buildings with today's technology.

And fantasy began to create shapes. A drawing kit and school education came to the rescue, which made it possible to put the generated idea on paper. Prototypes were made with tests, and they were done. The result was awesome. I caught myself thinking that maybe there are others with more demanding tastes. I could help. And so the Mobliner Stal brand was born.

OUR FOCUS

Our focus is first and foremost our customers. That you offer them ever wider opportunities for experimentation, in which the traditions of our forefathers and modern functionality are taken into account. And with guaranteed quality. We are also actively involved in bringing our brand into the daily lives of more and more people.

OUR HISTORY

2018

An idea of a visually soothing light fixture was born in the minds of Goth-era admirers, who also happen to be big fans of contemporary design and expression of art.

2019

As the drawing of a vivid soon-to-be materialized design has been taking an exceptionally long time, the search for the most suitable materials has started.

2020

From the pure sketches and ideas to the tangible prototypes were formed to compliment the eye and to frustrate the soul. Something was missing in every prototype.

2021

Some worthy prototypes reached the phase of real products, where they were vigorously tested, bending the spirit of the product to its limit.

2022

Final touches of the products were made, taking into consideration the outcomes of the oppressive testing, resulting in fine-detailed, soul-caressing, and eye-catching final results, which are being expressed here.

2023

The products were tested in a notified body, achieving the CE mark and a recognized quality class.

OUR BRAND

Our dream comes true at the moment when the brand Mobliner Stal means to our customers the courage to dream and the opportunity to implement projects outside the framework. Mobliner Stal - this is not a standard but a special solution. Mobliner Stal- this is a piece of nostalgia to remember the old days. We know it's a long and difficult road, but that's what we're striving for.

Quality

High-quality hand-made products with attention to detail. Products are designed and produced to last a lifetime.

Innovation

Our designers are constantly testing for new materials and working on new, innovative designs that are both stylish and sustainable.

Sustainability

Most advanced factories use the latest in green technology to produce products that are both high-quality and eco-friendly.
